

Itwela Ibomu

Atlanta, GA | US Citizen | (678) 278-5036 | iibomu@wgu.edu | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Professional Summary

Software engineer and founder who builds and ships customer-facing software end to end, directing generative AI as a hands-on engineering collaborator to specify, review, and deploy production features. Combines hard skills in Python, TypeScript, React, API design, and large language model integration with cross-functional communication, technical mentoring, and stakeholder advising across career technology, marketing technology, and media production.

Technical Skills

Languages: Python, TypeScript, JavaScript

Frontend: React, Next.js, React Native, Tailwind CSS

Backend & APIs: Node.js, Flask, REST API design, Convex, Supabase

Databases & Search: PostgreSQL, Pinecone, RAG / vector search

AI & Agents: OpenAI, Claude, LangChain, LangGraph, OpenAI Agents SDK

Infrastructure & Tooling: Docker, Railway, Git / GitHub, Stripe, Clerk

Media & Automation: ffmpeg pipelines, Chrome extension development, LaTeX

Core Competencies: Full-Stack Development, AI/LLM Integration, Agentic Workflows, Product Development, Technical Mentoring, Cross-Functional Communication, Stakeholder Advising, Problem-Solving, Agile Delivery, Team Leadership

Additional Skills: Systems Design, API Design, Prompt Engineering, Workflow Automation, AI Tool Evaluation

Education & Certifications

Western Governors University | B.S. Software Engineering | Salt Lake City, UT

Expected 2027

- 46 of 113 competency units completed toward degree
- Relevant coursework: Data Structures & Algorithms, Python, Front-End Web Development, JavaScript

Claude 101 | Anthropic (Skilljar)

2026

AI Fluency Framework: Foundations | Anthropic (Skilljar)

2026

J.P. Morgan Software Engineering Job Simulation | Forage

2024

Professional Experience

Founder / Full Stack Engineer | Caveman Creative | Atlanta, GA

Jan 2026 - Present

- Deliver client engineering that cut a music brand's social video production from 45 minutes of manual editing per clip to roughly one minute (by over ~90%), replacing the hand-built workflow with an automated render service
- Built and shipped JobKompass, a live AI career platform where real job seekers generate tailored resumes and cover letters, track every application, and reduce the need for them to manually write resumes on an average of 60%
- Design and ship Mosaic, a desktop app that replaced juggling ten scattered terminal windows with one saved workspace that reopens in the right directories, ready to work

Full Stack Engineer | Dope Marketing | Minneapolis, MN

Jul 2025 - Dec 2025

- Built an internal AI platform that let leadership query company data conversationally for the first time, pairing retrieval-augmented search with custom connectors to internal systems that had no off-the-shelf integrations
- Designed and shipped APIs granting agents instant access to millions of housing and client records, cutting manual lookup time from hours to minutes (by over ~60%)
- Delivered three production tools adopted company-wide, partnering with department leads to scope requirements and train staff, replacing manual research processes across departments

Itwela Ibomu

(678) 278-5036 | iibomu@wgu.edu

Full Stack Engineering Fellow | Headstarter | San Francisco, CA

Jul 2024 - Sep 2024

- Won three hackathons during the fellowship, including first place out of 300+ teams for CitySwipe, an AI vacation planner built while coaching a team of three
- Shipped five AI web apps with Next.js, LangChain, and Supabase, reaching 200+ users and 50K+ impressions

AI Engineer | Dataforce | Atlanta, GA

Apr 2024 - Jun 2024

- Reduced captioning error rates by 20% across 200 videos per day through workflow optimization
- Automated recurring quality assurance checks across the captioning pipeline, standardizing data processing

Technical Projects

JobKompass - AI Job Tracker & Analytics Platform | Live multi-tenant AI career platform with real users

- Engineered a distributed AI agent architecture backed by 12 custom tools that generates tailored resumes and cover letters, tracks applications, and delivers coached analytics
- Built an agent-first CLI with API-key auth and per-user ownership checks that exposes the platform to AI agents
- Built a document-generation pipeline pairing language models with a containerized LaTeX microservice on Railway, plus a Chrome extension that parses live job listings into the tracker in one click
- **Technologies:** Next.js, React, Convex, OpenAI Agents SDK, Claude, Stripe, LaTeX, Railway, Docker

Integrity - Ecommerce Store & Order Fulfillment | Direct-to-consumer storefront with order fulfillment

- Generated five figures in sales for my father's business, selling the audiobook produced in Lotus alongside book bundles
- Held order accuracy above 95% with a fulfillment system that ingests carrier tracking numbers, automates shipment-status emails, and centralizes order management
- Built the full authentication system and customer support flow so accounts and customer issues are handled in one place
- **Technologies:** React, Convex, Stripe, Authentication, Email Automation

Mosaic - Terminal Workspace Desktop App | Desktop app that turns scattered terminal windows into saved, ready-to-work workspaces

- Replaced juggling ten scattered terminal windows with a single saved workspace that reopens in the right directories, removing the setup ritual at the start of every session
- Extended the same workspace model beyond code to gather class links, study guides, and reference videos per course into one launcher
- **Technologies:** Tauri, Rust, React, TypeScript, Vite

Lotus - iOS AI Wellness App | Consumer iOS app with a language-model-driven content pipeline

- Designed the full user interface and built an API-driven agent pipeline orchestrating multiple language models and multimodal generators for automated title, audiobook style content, narration, and even image generation
- Kept all nine early users active across eight months with no paid promotion, pricing the app by analyzing dozens of model tradeoffs
- **Technologies:** React Native, Replicate, OpenAI, Convex
